

UI Flow Documentation - Add Client Form

Component Name: AddclientsATS.js

Purpose:

To dynamically collect client details based on the selected Business Type and its corresponding Subtype (if applicable). Also supports multi-entry for RPO configurations.

Business Types & Dynamic Behavior:

1. Business Type Selection (Radio Group)

User selects one of the following:

- Contract
- Permanent
- RPO

2. If "Contract" is selected

Subtype Options:

- Contract
- Contract MSP

Fields for "Contract":

- Client Name
- Industry (select)
- Website
- About Us
- No. of Employees

- Notes

Fields for "Contract MSP":

- MSP Name
- Client Name
- MSP %
- Industry
- Website
- About Us
- No. of Employees
- Notes

3. If "Permanent" is selected

Subtype Options:

- Permanent
- Permanent MSP

Fields for "Permanent":

- Client Name
- %
- Industry
- Website
- About Us
- No. of Employees
- Notes

Fields for "Permanent MSP":

- MSP Name
- Client Name
- MSP %
- AFORV Billing %
- Client %
- Industry
- Website
- About Us
- No. of Employees
- Notes

4. If "RPO" is selected

No Subtype needed.

Allows multiple entries with fields:

- Skill Category
- Exp Range
- Invoice Value

Includes "Add" and "Delete" buttons for managing entries.
